Stage 2 PPT V1.0 — Readiness report

Blue Impulse · Hardware, Networking and Behaviorist AI · 7 November 2026

Concrete deliverable

63 editable PowerPoint slides cover all six chapters in three sessions. Native presenter notes, 15 timed audience tasks, checked answers, a native slide PDF, a complete notes PDF, offline Python demonstrations, reference maps, fonts and source files are included.

Rubric-aligned evidence

Essential coverage and teaching story

Slides 1–25 establish representation, execution and behavior; 26–45 connect hardware and communication; 46–63 integrate applications and constraints. Pip’s delayed response opens the lesson; the final architecture challenge resolves it.

Accuracy and explanatory quality

Worked examples and visual models explain state changes, reinforcement learning, pipelining, delays and message handling. Notes disclose assumptions and common misconceptions. Checked arithmetic and outputs are preserved in the supporting files.

Visual design and readability

The native PDF uses only Inter, with minimum visible text 28.0 pt. White/navy contrast is 16.29:1 and pink/navy is 5.26:1. Every authored text element was found in the native export; all extracted text lies within the page. Actual projector readability still needs a human check.

Audience engagement

15 brief tasks ask learners to calculate, predict, compare, justify or diagnose. Prompts include realistic thinking time and notes include debriefs. Main numerical challenges have later answer slides; discussions explicitly allow justified alternatives.

Notes and teaching readiness

All 63 slides have native notes, approximate timing, exact subtopic references and source guidance. Optional demonstrations need only Python 3.9 and include complete expected output; the slide tables are the offline fallback.

Learning-system coherence

The deck uses the same six chapters, Pip example and checked numerical cases as the Markdown, guide and focused videos. The local resource map gives specific subtopics, exercise IDs and all five tutorial filenames.

Verification evidence and limitations

Checks actually completed

PPTX archive opened successfully; 63 slide parts and 63 native note parts are present. Both Inter weights are embedded. All explanatory audience objects are editable text/shapes; the slides do not contain rasterized pages. The actual deck opened and exported through Keynote, and an automated slideshow start/stop succeeded at slide 29.

All 63 native slide renders were inspected via contact sheets, with representative diagram/table slides inspected at full size. Font-metric checks were followed by native text-presence, font and bounds checks. This is software-assisted review, not evidence of a classroom presentation.

passed: signed byte, raw image size, Q update and terminal state, pipeline, delay, packet order and freshness boundary, program and modified ADD, AND truth table

Evidence files

review/verification.json; review/layout-audit.json; review/contact-01.jpg through contact-07.jpg; review/slide-08.png, 17, 29, 41, 50 and 60; supporting/expected-results.json; supporting/AI_Use_Evidence.md; review/source-link-check.json.

Significant AI use

NeoGPT/Codex generated substantial content, diagrams, notes and builder code under the user’s instruction to apply the Stage 2 rules. The AI-use evidence file contains the relevant request, concrete outputs, decisions, corrections and verification. No individual student mastery, unobserved contribution, teacher feedback or audience response is inferred.

Human checks still pending

Another team member must review the slides and rehearse a representative section using these notes. Check actual classroom projection from the back, refine planned activity timing and confirm that the presenter can explain the models and assumptions. These checklist items are intentionally not marked complete.

Submission format and accessibility

Submit BlueImpulse_Stage2_PPT_V1.zip because it contains multiple required files. It includes the editable PPTX, actual notes, supplementary PDFs and all needed supporting files. The PDF does not replace the PowerPoint. External sources and related video links are optional continuation material, not missing required explanations.
