Blue Impulse — Markdown V2.0 submission report

Team: Blue Impulse
Module: Hardware, Networking and Behaviorist AI
Snapshot date: 7 November 2026 (UTC+8)
Repository (supplementary): https://github.com/user-github-me/cs-ai-project-01
Historical repository baseline (HEAD before the uncommitted snapshot changes): 5ebb2bbde8f403491f1f8015106721b39b05d3f2

This package includes the complete updated Markdown source and supporting assets, the full rendered content PDF and this report. The files contain uncommitted Stage 2 revisions made after the identified baseline; the SHA-256 manifest fixes the submitted snapshot independently of a later upload commit. GitHub links are supplementary; current access settings are recorded in the repository README. The supplied PDF and snapshot contain the required learning content directly.

Revision summary

Observed problem / instruction	Change and reason	Location
Chapter draft/readme files contained placeholders such as “put your draft here la!!!!!”.	Reconciled all 67 developed guide topics into substantive Markdown, adding application and feedback checkpoints.	content/chapter-01…06/draft.md; content/topic-map.json
Chapter solutions were placeholders and the guide explicitly omitted the answer key.	Added 65 explained answers with matching preserved IDs; appended feedback to the complete guide.	content/chapter-01…06/solutions.md ; guide answer appendix
Activities lacked a consistent goal/task/observation/feedback sequence.	Created ACT-01…06 with a fictional Pip story, full inputs, predictions, reflection and offline feedback.	content/chapter-01…06/activities.md
No separate minimum-compliant editable Test Bank.	Added 24 T/F, 24 MCQ and 6 open tasks, balanced equally across six chapters, with questions first and explanatory key later.	BlueImpulse_Stage2_TestBank_V1.docx and matching Markdown/PDF
Sources in supplied PDFs lacked a complete textbook bibliography.	Documented the limitation and added six traceable optional resources with section guidance, tasks, access notes and fallbacks.	content/references.md; mission resource introductions
New user direction removes guide screenshots/page citations from tutorials.	Preserved stable chapter names/subtopic titles and added a machine-readable topic map for all resources.	content/topic-map.json; resource mapping below
Required independent human checks have no available evidence.	Marked the requirement pending rather than fabricating peer attempts, feedback or learning.	content/REVIEW.md; package verification record

Review results

• All 67 guide topics have developed Markdown explanations and a specific application checkpoint with feedback.

• All 65 retained source exercise IDs have explained answers.

• Six missions specify goals, preparation, steps, observations, reflection and expected outcomes; they run on paper without an external service.

• Five optional standard-library Python demonstrations were run, including changed program and speed inputs. Exact JSON outputs are bundled with the source.

• The Test Bank contains 24 T/F, 24 single-answer MCQ and six substantive open tasks: exactly 4/4/1 per chapter. All questions precede the answer key. Each open task has explicit expected points totalling 10 marks and a developed sample response.

• Resource pages R1–R6 returned HTTP 200 in signed-out requests. Their identity and relevant subject matter were inspected. External resources are optional and every task has a complete offline explanation or trace.

• Original cover and all six dividers are retained without overlays. The complete guide adds activities and answer feedback after the existing core.

• Final PDFs are checked for readable selectable text and page bounds; packages are extracted and compared by SHA-256.

Resource mapping

Markdown topic	Study Guide / Test Bank	PPT use	Video use
content/chapter-01/draft.md — The Fundamentals	Guide chapter 1; ACT-01; TF01–TF04, MC01–MC04, OE01	Six-chapter classroom teaching deck — Chapter 1 The Fundamentals	Video 05 — Program Execution
content/chapter-02/draft.md — Behaviorism & Behaviorist AI	Guide chapter 2; ACT-02; TF05–TF08, MC05–MC08, OE02	Six-chapter classroom teaching deck — Chapter 2 Behaviorism & Behaviorist AI	Video 01 — Basic Reinforcement Learning
content/chapter-03/draft.md — Hardware	Guide chapter 3; ACT-03; TF09–TF12, MC09–MC12, OE03	Six-chapter classroom teaching deck — Chapter 3 Hardware	Video 02 — How Hardware Enables AI; Video 05 pipeline link
content/chapter-04/draft.md — Networking	Guide chapter 4; ACT-04; TF13–TF16, MC13–MC16, OE04	Six-chapter classroom teaching deck — Chapter 4 Networking	Video 03 — Network Challenges
content/chapter-05/draft.md — Applications	Guide chapter 5; ACT-05; TF17–TF20, MC17–MC20, OE05	Six-chapter classroom teaching deck — Chapter 5 Applications	Video 04 — Networking for Behaviorist AI; Video 03 deadline link
content/chapter-06/draft.md — Strengths & Limitations	Guide chapter 6; ACT-06; TF21–TF24, MC21–MC24, OE06	Six-chapter classroom teaching deck — Chapter 6 Strengths & Limitations	Not selected as a standalone video; limitations integrated across tutorials

The slides/videos adapt this foundation for their media; not every paragraph appears in every resource. Topic references use the canonical chapter number/name/subtopic. The visual and narration revision is coordinated in the project repository; package-specific media checks belong to the video and slides submissions.

Selected development evidence

The following actual commit history is reproduced so the report does not rely on a web link:

```
5ebb2bb | 2026-11-07 | feat: add printable tutorial scripts and teaching documents packag
  e
bc91f1e | 2026-11-07 | Revised chapter 3 outline
14c6ed1 | 2026-11-06 | chore: upload final presentation and record project deliverables
238cf9e | 2026-11-06 | feat: add five Blue Impulse study-guide video tutorials
52bf6d2 | 2026-11-06 | Create activities.md with multiple computer science activities
b40933c | 2026-11-06 | feat: add six-chapter Blue Impulse study guide PDF
9a645d0 | 2026-11-06 | Add files via upload
7afde2c | 2026-11-06 | Updating the Chapter 3 Sub Topic
```

The earlier study-guide and video commits demonstrate prior production. The current revision repairs the missing shared Markdown source and feedback. For example, content/chapter-03/draft.md previously contained “put your draft here la!!!!!”; it now develops thirteen hardware topics. The new pipeline checkpoint asks for five instructions in four ideal stages and explains 4 + 5 − 1 = 8 cycles. The original solutions file’s request for future answers is replaced by worked answers, including exact binary, image-size, Q-update and network-delay calculations.

The guide and paper mission now agree that a 200 ms delay at 30 m/s contributes 6 m of delay distance, not complete stopping distance. ACT-05 records ACCEPT / STALE / DUPLICATE with accepted sequence state 42 / 42 / 42, matching the executable demonstration. These are concrete revisions and results rather than a count of commits.

Remaining process gaps and next steps

The rules require a different team member to attempt every Test Bank question and selected learning activities. No such attempt or learner feedback has been supplied in this session. The assistant cannot stand in for an independent student. A reviewer must record their name, actual answers/results, confusion, revisions and date in the project and personal logs. Teacher feedback specific to the six-chapter content was not available; this revision therefore records observed repository gaps and the user’s instructions instead of inventing feedback.

The team must also confirm that every member has read and understood their contribution, and complete authentic contribution/learning records. These are submission-process gaps, not hidden content placeholders. No unperformed meeting, learner test, rehearsal or reflection is claimed.

The development history is preserved honestly: the initial guide was produced before this complete Markdown reconstruction. The present package is the reconciled V2 foundation for subsequent revision, not a backdated claim of workflow compliance.
